Typewriter for the Blind (Perkins Braille)

Typewriter for the Blind (Perkins Braille)

Introduction:

The facilities of each country, including educational, cultural, social, etc. belong to all of its people and it is totally wrong to prefer ordinary people to those with disabilities. The active presence of people with disabilities hinges on the acceptance of this idea by the all individuals of a society. The more a society feels responsible towards people with disabilities, the less restrictions they feel about

participation in social activities:

In line with this view, E.E.I. has produced a Perkins Braille to meet part of this portion of society, in keeping with the following goals:

The necessity of development of self-help services to the blind
Encouraging and enabling the blind to improve their scientific and social skills

The necessity of using the Perkins Braille to teach typewriting

Capabilities:

- Easy adjustment of the device for paper of different weights (light and heavy)
- Light structure (aluminum)
- High-precision mechanism and error-correcting
- Typing all mathematical symbols
- Types 42 letters per line and 32 lines per page

Characteristics and Advantages:

- Costs one third of equivalent foreign models
- Comes with free carrying bag
- Comes with free corrector pen
- Comes with user manual and service and maintenance manual in Farsi and in Braille
- Spare parts available in at most 48 hours upon request
- Packaging: 5-ply cardboard, along with stabilizing styrofoam
